# FIRMWARE UPGRADE PROCEDURE
FOR THE DMG LION™

This instruction sheet is for updating the firmware inside DMG LION.

1. Download the updated firmware and save it to a USB-C hard drive.

2. Insert hard drive with the updated firmware into the fixture's USB-C port.

3. Select the Update option in the General Settings menu.

4. Select the firmware you wish to upload, and press START on the fixture's Display.

5. Wait for update to be uploaded.

6. Once the update status bar is red, press REBOOT. A reboot must be done in order to complete the update and may take a few minutes. The Display will be black during the reboot process.

7. Once the reboot is done, the Display will automatically turn back on displaying the Product Info screen within the General Settings.

IMPORTANT: Do not remove the USB-C drive or power down the fixture until the update is complete.

Congratulations, you have successfully updated the firmware inside your DMG LION!
